

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claims 1-23. (Canceled)

Claim 24. (Currently Amended) A server apparatus connected with a transmitting facsimile apparatus and a receiving facsimile apparatus via the Internet, the server apparatus comprising:

a memory configured to store reception capabilities regarding a type of facsimile data that the receiving facsimile apparatus can receive, the reception capabilities being distinct from facsimile data; and

a controller configured to receive facsimile data from the transmitting facsimile apparatus, to transform the received facsimile data into a type of facsimile data that the receiving facsimile apparatus can receive, based on the reception capabilities stored in the memory, and to transmit the transformed facsimile data to the receiving facsimile apparatus.

Claim 25. (Currently Amended) The server apparatus according to claim 24, wherein a reception capability regarding a type of facsimile data is a type of file data that the receiving facsimile apparatus can receive.

Claim 26. (Previously Presented) The server apparatus according to claim 25, wherein a type of file data is at least one of MH, MR, MMR and JPEG.

Claim 27. (Currently Amended) A server apparatus connected with a facsimile via the Internet, the server apparatus comprising:

a memory configured to store reception capabilities regarding a type of facsimile data that the facsimile apparatus can receive, the reception capabilities being distinct from facsimile data; and

a controller configured to receive, from the facsimile apparatus, an e-mail with a predetermined address, the e-mail indicating the reception capabilities of the facsimile apparatus to be stored in the memory, and the controller being further configured to store the reception capabilities of the facsimile apparatus in the memory.

Claim 28. (Previously Presented) The Internet facsimile apparatus according to claim 27, wherein the controller determines whether or not the e-mail address is the predetermined address, and in response to a determination that the e-mail address is the predetermined address, stores the capabilities of the facsimile apparatus in the memory.

Claim 29. (Currently Amended) An Internet facsimile apparatus connected with a server apparatus via the Internet, the Internet facsimile apparatus comprising:

a communicator configured to communicate with a server apparatus via the Internet; and

a controller configured to transmit to the server by e-mail, reception capabilities regarding a type of facsimile data that the Internet facsimile apparatus can receive, the transmitted e-mail having a predetermined address, the e-mail indicating the reception capabilities of the Internet facsimile apparatus to be stored in the server apparatus.

Claim 30. (Currently Amended) A communication terminal capability exchanging method comprising:

storing reception capabilities regarding a type of facsimile data that a receiving facsimile apparatus can receive, the reception capabilities being distinct from facsimile data;

receiving facsimile data from a transmitting facsimile apparatus;

transforming the received facsimile data into a type of facsimile data that a receiving facsimile apparatus can receive, based in the stored capabilities; and

transmitting the transformed facsimile data to the receiving facsimile apparatus.

Claim 31. (New) The server apparatus according to claim 27, wherein the predetermined address indicates that the e-mail contains data regarding the reception capabilities of the facsimile apparatus to be stored in the memory of the server apparatus.

Claim 32. (New) The Internet facsimile apparatus according to claim 29, wherein the predetermined address indicates that the e-mail contains data regarding the reception capabilities of the Internet facsimile apparatus to be stored in the server apparatus.
